

How to Connect Your Stripe Account to systeme.io

Introduction

Stripe powers card payments, subscriptions, and payment plans inside your funnels on systeme.io. Connecting is an OAuth-style flow: you authorize systeme.io from Stripe's official login page—no manual API key copy-paste for the standard integration.

This tutorial mirrors [How to connect your Stripe account to systeme.io](#) and continues with checkout activation in [How to activate payments by Stripe or PayPal](#).

What You Need

- A systeme.io account on a plan that supports selling ([compare plans](#))
- A **Stripe** account—or willingness to create one during connect
- Stripe **business verification** completed (identity, bank for payouts)
- A sales funnel with an order / payment step

Add PayPal as a second option if you want: [How to integrate PayPal with systeme.io](#).

Step 1: Open Payment Gateways

1. Click your **profile picture**
2. Select **Settings**
3. On the left menu, click **Payment gateways**
4. Locate **Stripe** and click **Connect**

You land on Stripe's hosted page—not a third-party connector. Always confirm the URL is stripe.com before entering credentials.

Step 2: Log In and Authorize Stripe

1. **Log in** to your existing Stripe account, or **create** a new one
2. Complete any **onboarding** Stripe requests (business details, bank account)
3. Review the permissions systeme.io is asking for
4. Click **Authorize access to this account**
5. You are **redirected back** to systeme.io; Stripe should show as connected

Two-factor codes on your phone are normal during Stripe login. Finish Stripe's "activate payments" checklist before expecting live charges.

Required Fields on Payment Pages

Important: For Stripe to work correctly on [systeme.io checkout](#), your payment pages must collect **Email** and **First name**. If either is missing from the form, fix the funnel step before going live—failed checkouts often trace back to stripped-down order forms.

Step 3: Enable Stripe on the Funnel

Account connection alone does not turn on card payments everywhere. Per funnel:

1. **Sites** → **Sales funnels**
2. Open your funnel
3. **Funnel settings**
4. Check **Credit card or debit card** (Stripe)
5. Optionally enable **PayPal** if connected

6. Save

Step-by-step screenshots logic: [activate payments by Stripe or PayPal](#). Tie offers and pricing to the funnel ([How to create an offer](#)).

What You Can Sell After Connecting

- One-time products and order bumps
- **Subscriptions** and installment / payment plans (Stripe handles recurring billing)
- Upsells and downsells in the same funnel payment flow
- Apple Pay when Stripe + custom domain are set up ([Apple Pay via Stripe](#))

Troubleshooting

Connect button loops or errors

Clear cookies, try Chrome/Firefox, complete Stripe dashboard “restricted” banners first.

Payments fail at checkout

Verify live vs test mode in Stripe matches your intent; confirm Email + First name on the form.

Split payouts / Stripe Connect sub-accounts

Use the Stripe account that actually owns the charges; marketplace split setups may need direct Stripe support—standard [systeme.io](#) connect expects one primary business account.

Still stuck

[Contact \[systeme.io\]\(#\) support](#) with funnel URL and Stripe payment intent ID if available.

Frequently Asked Questions

Do I paste Stripe API keys manually?

No for the default integration—use **Connect** and **Authorize access**.

Stripe only or Stripe + PayPal?

Most funnels enable both checkboxes so buyers choose card or PayPal.

Does connecting Stripe tag contacts automatically?

Successful funnel purchases create/update CRM contacts per your funnel automation rules—test a sale to confirm tags and course access.
