

How to Create a Blog Page

Introduction

Blog pages are static pages on your site—About, Resources, Legal, or custom landings—distinct from dated **posts** in the Posts tab. On systeme.io, you add them under **Sites** → **Blogs** → **Pages** → **Create**, then design them in the visual editor like funnel pages.

This guide follows [How to create a blog page](#).

What You Need

- A systeme.io account ([plan](#))
- An existing **blog** ([create a blog](#))

Default Pages When You Create a Blog

When you create a new blog, systeme.io generates **sample pages** (typically Home, About, Posts listing, Contact, and Search, depending on template).

- **Home page, Post list page, and Search page** — **mandatory** (cannot delete)

- **About** and **Contact** — can be edited or deleted if you replace them

Edit defaults via the **three dots** → **Edit**, or add new pages alongside them.

Step 1: Open the Pages Section

1. Go to **Sites**
2. Click **Blogs**
3. Click your **blog's name**
4. In the blog menu, open **Pages**

Step 2: Create a New Blog Page

1. Click **Create**
2. Enter the **Blog page name** (internal/admin label and default title)
3. Enter the **URL path** (e.g. /resources or /about-me)
4. Click **Create a blog page** to save

Your new page appears in the list. You can change name and path later via **three dots** → **Settings** on systeme.io.

Step 3: Edit and Manage the Page

Use the **three dots** menu on each page:

- **View** — preview as a visitor
- **Edit** — open the page editor (add rows, text, images, forms)
- **Duplicate** — copy the page
- **Don't use blog layout** — page uses its own layout instead of the shared blog template
- **Settings** — change page name and URL path
- **Delete** — remove the page (not available for mandatory pages)

Save changes in the editor before exiting. Link new pages in your [blog menu](#).

Pages vs Posts

Posts ([create a blog post](#)) are articles with publish dates, categories, and RSS updates. **Pages** are fixed URLs for evergreen content. Use pages for legal text, team bios, or tool lists; use posts for SEO articles.

Troubleshooting

Cannot delete a page

Home, Post list, and Search are required for blog structure.

404 on new path

Check URL path spelling; avoid conflicting with category or post slugs.

Page looks wrong vs rest of site

Keep blog layout enabled, or customize via **Blog layout** for global chrome.

[Contact systeme.io support](#) with blog name and page path.

Frequently Asked Questions

What is the difference between a blog page and a blog post?

Pages are static; posts are dated articles in Posts with categories.

Which pages cannot be deleted?

Home, Post list, and Search pages are mandatory.

What is Don't use blog layout?

One-off custom design for that page without the default blog shell.
