

How to Create a Blog with systeme.io

Introduction

A **blog** on systeme.io is ideal when you publish articles regularly and want many content pages—often paired with email capture and funnels. You build it under **Sites** → **Blogs**: pick a template, set domain and URL path, then manage **posts**, **pages**, and **categories** from one dashboard.

This guide follows [How to create a blog with systeme.io](#).

What You Need

- A systeme.io account ([plan](#) with blog feature)
- Optional: a [custom domain](#) connected for branded URLs

For only a few static pages, a [sales funnel website](#) may be simpler than a full blog.

Step 1: Create the Blog

1. Open the **Sites** tab
2. Click **Blogs**
3. Click **Create**
4. In the popup, enter a **Name** for your blog
5. Select the **Blog domain** (systeme.io subdomain or connected custom domain)
6. Set the **URL path** (e.g. /blog or root if this is your main site)
7. Choose a **template** (preview templates before saving—you start from a template, not a blank site)
8. Click **Save**

Your new blog appears in the list. Open it anytime by clicking its **title** on [systeme.io](#).

Step 2: Layout, Preview, and Settings

Inside your blog, open the **Pages** tab for structure and design tools:

- **Blog layout** — global look shared across blog pages (menus, headers)
- **View blog** — live preview as visitors see it
- **Blog settings** — change **name**, **domain**, **URL path**, and **language**

Note: When you create a blog, an **RSS feed** is automatically generated. It updates each time you publish a new post. Copy the feed URL from **blog settings** for newsletters or podcast directories.

Customize navigation via [blog menu](#) in the blog layout editor.

Step 3: Posts, Pages, and Categories

Use the blog sub-menu:

- **Posts** — articles ([create a blog post](#))
- **Pages** — static pages like About or Contact ([create a blog page](#))
- **Categories** — organize posts ([create a category](#))

On each tab, click **+ Create** (or **Create**) to add content. To edit or delete, use the **three dots** → **Edit** or **Delete**.

Note: The **Home page** and **Post list page** cannot be deleted—they are essential to the blog structure. About and Contact pages can often be removed or replaced.

Tune how every post looks with [post layout](#) (title, image, categories, content blocks).

Template Default Content

The template you selected ships with sample **posts**, **pages**, and **categories**. Edit them to match your brand or delete sample posts you do not need—keep mandatory pages intact.

Use the Blog as Your Main Website

To make the blog homepage your site's main URL, adjust **blog settings** so the homepage path is your root URL (clear extra path segments per [website methods guide](#)).

Troubleshooting

Domain not in dropdown

Connect the domain under Settings → Domains first.

Cannot delete a page

Home, Post list, and Search pages are required on many templates.

RSS not updating

Publish posts (not only drafts); confirm feed URL in blog settings.

[Contact systeme.io support](#) with blog name and domain.

Frequently Asked Questions

How many blogs can I create?

Depends on your plan limits—check account quotas in Settings.

Can I switch templates later?

Layout and pages are editable; switching entire templates may require manual rework—choose carefully at creation.
