

How to Create a Course Using systeme.io

Introduction

With systeme.io, you can host a **membership-style course site**: sell access, drip lessons over time, or grant full access from day one. Course creation starts in **Assets** → **Courses**, then you structure **modules** and **lectures**, add videos or text, and **activate** lectures so students actually see them.

This guide follows [How to create a course using systeme.io](#).

What You Need

- A systeme.io account ([plan](#))
- A connected domain (or default systeme.io subdomain) for the course URL
- Lesson content ready (video files, text, downloads)

Step 1: Create the Course

Here's how it works:

1. In the menu, go to **Assets** and click **Courses**
2. Click **Add a new course**
3. Fill in the fields:
 - **Name** — course title shown to students
 - **Domain** — where the course is hosted
 - **URL path** — slug segment for the course URL (e.g. /my-course)
 - **Theme** — pick one of the available course themes
1. Click **Save** so settings are stored

Note: You can modify name, domain, path, and theme later in course settings.

Step 2: Create a Module

After the course exists, build the curriculum in sections:

1. Open your course
2. Click **Add module**
3. Enter a **name** for the module in the popup
4. Click **Save**

Repeat for each chapter or week of your program on systeme.io.

Step 3: Create Lectures

Inside a module, click **Add lecture**. In the popup, set:

- **Name** of the lecture
- **Delay after the previous lecture** — for drip release (used with drip access mode)
- **Enable comments** — optional student comments on this lecture

Save, then open the lecture editor to add **title**, **body text**, **video**, or **file attachments**. Save your work as you go—the editor does not auto-save every change.

Step 4: Activate Lectures (Publish)

When you create a new lecture, it is **automatically saved as a draft**. Students see **No lectures yet** until content is published.

1. Go to **Assets** → **Courses** and open your course

2. Hover the **three dots** next to a lecture
3. Click **Activate**

After activation, preview the course and confirm lessons appear for enrolled students.

Course Access Types (Overview)

In course settings you can control how students see content:

- **Full access** — instant access to all modules and lectures (delays ignored)
- **Drip content** — progressive access based on delays between lectures
- **Partial access** — only selected modules
- **Partial access with drip** — selected modules with timed release inside them

Delays run from the **release of the previous chapter**, not necessarily from the purchase date—plan your drip accordingly.

Sell and Enroll Students

Connect your course to a **funnel** or **payment page** so checkout grants access. Purchasers can appear in **Contacts** for automations. You can also manually enroll students or use course bundles when your plan supports them.

Troubleshooting

No lectures yet for students

Activate lectures—drafts are hidden from the student view.

Drip not matching expectations

Confirm access type is Drip, not Full; check delay-after-previous-lecture values.

Course URL not loading

Verify domain, URL path, and that the course is saved.

[Contact systeme.io support](#) with course name and URL.

Frequently Asked Questions

Where do I create a course?

Assets → Courses → Add a new course.

Are new lectures visible to students immediately?

No—activate each lecture after editing.

Can I change course name domain or path later?

Yes—update course settings anytime.
