

How to Integrate Mollie with systeme.io

Introduction

Mollie is a popular European payment provider for cards, **iDEAL**, **Bancontact**, and other local methods. On systeme.io, Mollie connects through a simple **OAuth-style** link—you sign in to Mollie and authorize the platform, without manually copying secret API keys like some other gateways. Merchants in the Netherlands, Belgium, and wider EU often choose Mollie as an alternative to [iDEAL/Bancontact via Stripe](#).

This guide follows [How to integrate Mollie with systeme.io](#).

What You Need

- A systeme.io account ([plan](#) with payment gateways)
- A [Mollie](#) account (create one during connect if needed)
- Mollie account verification completed for **live** payments
- A sales funnel with order form and offer in a currency your Mollie profile supports

Step 1: Connect Mollie in systeme.io

1. Log in to your systeme.io account
2. Click your **profile picture** → **Settings**
3. In the left menu, open **Payment gateways**
4. Click **Connect** next to **Mollie**
5. You are redirected to Mollie to **log in** or **create an account**
6. After logging in, click **Log in** / continue as prompted
7. Click **Connect** to authorize systeme.io to use your Mollie account

When the connection succeeds, Mollie appears as connected on the Payment gateways page in systeme.io.

Step 2: Select the Right Mollie Profile

If you operate **multiple Mollie profiles** (e.g. different brands or countries):

1. Return to **Settings** → **Payment gateways**
2. Click **Change profile** on the Mollie row
3. Choose the profile that should receive funnel payments
4. Click **Save**

Wrong profile = settlements and payment methods tied to the other business entity—double-check before going live.

Step 3: Configure Payment Methods in Mollie

To configure payment methods for your profile, go to the Mollie dashboard.

- Enable the methods you want (cards, iDEAL, Bancontact, SEPA, etc.) for that profile
- Complete any Mollie onboarding steps for each method
- Use **test mode** in Mollie for sandbox checkouts before switching to live

systeme.io does not replace Mollie's method activation—buyers only see methods that are active on the linked Mollie profile.

Step 4: Use Mollie on Your Sales Funnel

After the account link works, enable Mollie on each funnel that should accept it—same pattern as [Stripe or PayPal](#):

1. **Sites** → **Sales funnels** → your funnel
2. **Funnel settings**
3. Enable **Mollie** (and disable competing gateways on that funnel if you want Mollie-only checkout)
4. **Save**

Build or update your [order form](#) and [offer](#) , then run a small live or test payment and confirm it under **Sales** → **Transactions**.

Mollie vs Stripe for iDEAL

systeme.io supports **iDEAL and Bancontact through Stripe** ([dedicated guide](#)) and **Mollie as its own gateway**. Pick one primary path per funnel—do not assume both show the same methods on one checkout without testing.

Troubleshooting

Connect button loops or fails

Pop-up blockers, wrong Mollie login, or incomplete Mollie KYC—finish verification in Mollie first.

Checkout missing iDEAL/Bancontact

Method not activated in Mollie Dashboard for the selected profile.

Payments in Mollie but not in systeme.io

Wrong profile selected; reconnect or Change profile; contact support with payment ID.

[Contact systeme.io support](#) with funnel URL and Mollie transaction reference.

Frequently Asked Questions

Is Mollie available in every country?

Mollie targets European merchants; eligibility depends on your Mollie account country and verification.

Can I use Mollie and Stripe on the same funnel?

Funnel settings can list multiple gateways; clarify checkout UX by enabling only what you want customers to use.
