

How to Integrate Secure and Pay with systeme.io

Introduction

Secure and Pay is a payment solution available as a native gateway on systeme.io —useful when Stripe or PayPal alone do not match your merchant setup or regional needs. Unlike Razorpay (self-service webhooks in the processor dashboard), Secure and Pay integration is **partly support-assisted**: you copy a webhook URL from systeme.io, send it to Secure and Pay, then paste credentials they email back.

This guide follows [How to integrate Secure and Pay with systeme.io](#) and aligns with other gateway articles ([Razorpay](#), [PayPal](#)).

What You Need

- A systeme.io account ([plan](#) that supports selling)
- An active **Secure and Pay** merchant relationship (onboarding completed with them)
- A sales funnel with an order form ([create an order form](#))
- Offers priced in **USD, EUR, or GBP** only

Platform Rules (Read Before Launch)

1. **Buyer fields:** **Email**, **first name**, and **last name** must be collected on payment pages—Secure and Pay rejects or mishandles payments without them.
2. **Currencies:** Only **USD**, **EUR**, and **GBP** are accepted.
3. **Subscriptions:** Billing periods are calculated in **days**—align offer subscription settings accordingly.

Step 1: Start the Connection

1. Click your **profile picture**
2. **Settings**
3. Left menu: **Payment gateways**
4. Find **Secure and Pay** → **Connect**

A configuration popup opens—this is where the webhook URL appears and where you will later enter API credentials.

Step 2: Copy Webhook URL & Contact Secure and Pay

1. Copy the **auto-generated webhook URL** from the popup
2. Open Secure and Pay's **contact form** (merchant support channel)
3. Submit the webhook URL and request integration with **systeme.io**
4. Wait for their reply email with login / integration details

Secure and Pay configures the webhook on their infrastructure—you do not paste this URL into a self-serve dashboard the way you would for Stripe or Razorpay. Keep the systeme.io popup open or reconnect later to finish Step 3.

Step 3: Enter Site ID and API Secret Key

When Secure and Pay emails you:

1. Return to **Payment gateways** → **Secure and Pay** → **Connect** (or the open popup)
2. Paste **Site ID**
3. Paste **API Secret Key**—in their email this value may be labeled **Password**
4. Click **Save** to finalize

After Save, successful payments should sync to CRM and Transactions on [your systeme.io account](#) when webhooks fire correctly.

Step 4: Enable on Your Funnel

1. **Sites** → **Sales funnels** → open your funnel
2. **Funnel settings**
3. Enable **Secure and Pay** alongside other methods if desired
4. **Save**

Verify the order form includes mandatory name and email fields and that the linked offer uses USD, EUR, or GBP ([create an offer](#)).

Test & Go Live

- Run a small real or test transaction per Secure and Pay's environment
- Confirm sale in **Sales** → **Transactions**
- Confirm buyer receives access and optional invoice ([send invoice](#))

Troubleshooting

Payment fails at checkout

Check email + first + last name on form; currency is USD/EUR/GBP; offer matches funnel currency.

Sale in Secure and Pay but not in systeme.io

Webhook URL not configured by support—resubmit URL via contact form; confirm Save with correct Site ID and secret.

Wrong secret

Use the API secret from the latest email (field named Password)—not your merchant login password unless documented otherwise.

[Contact systeme.io support](#) and Secure and Pay support with transaction reference and webhook URL.

Frequently Asked Questions

Secure and Pay vs Stripe?

Stripe is self-serve OAuth/API on [systeme.io](#); Secure and Pay needs support to register your webhook—choose based on your merchant contract and geography.

Can I use INR or other currencies?

No for this gateway integration—use [Razorpay](#) or another supported processor for other currencies.
