

How to Integrate Your Mercado Pago Account with systeme.io

Introduction

Mercado Pago is the go-to processor for selling in **Latin America** (Argentina, Brazil, Mexico, Colombia, Chile, and other supported markets). On systeme.io, you connect it like other native gateways: paste **production** credentials, then register the auto-generated **webhook URL** in Mercado Pago so payments sync to CRM, Transactions, and product access.

This guide follows [How to integrate your Mercado Pago account with systeme.io](#) —comparable to [Flutterwave](#) (keys + webhooks) but with Mercado Pago's developer application and **Country** selector.

What You Need

- A systeme.io account ([plan](#) that supports selling)
- A verified **Mercado Pago** seller account in your country
- A **developer** application with **production credentials** activated (Public Key + Access Token)

- A sales funnel with order form and offer in a currency Mercado Pago supports for your account

Step 1: Generate Production Credentials in Mercado Pago

1. Log in to Mercado Pago
2. Open **Settings** → **Integrations** → **Your integrations** (or use the [Mercado Pago Developers](#) panel)
3. Click **Create application**
4. Name the app; choose **Online payments** and indicate you sell **through a platform**
5. Confirm and **Activate production credentials** (complete any business questions Mercado Pago requires)
6. Copy **Public Key** and **Access Token** from **Production credentials**—not test/sandbox keys for live funnels

Keep the Access Token private—server-side only, same as any payment API secret.

Step 2: Connect Mercado Pago in systeme.io

1. Click your **profile picture** → **Settings**
2. Left menu: **Payment gateways**
3. **Connect** on **Mercado Pago**
4. Enter:
 - **API Public Key**
 - **Access Token**
 - **Country** (must match the Mercado Pago account country)
5. Click **Save**

After a successful save, systeme.io shows a unique **webhook URL** (pattern like `https://systeme.io/payment/webhook/listening-mercado/...`). **Copy it**—you need it in Step 3. Do not swap countries or credentials between different MP accounts.

Step 3: Configure Webhooks in Mercado Pago

Mercado Pago calls this **IPN/Webhooks** configuration; for new integrations, **webhooks** are the supported path (not legacy IPN-only setups).

1. Copy the webhook URL from the systeme.io Mercado Pago connect step
2. In Mercado Pago Developers, open the **same application** you created in Step 1
3. Left menu: **Notifications** → **Webhooks**
4. **Configure notifications**
5. Tab **Production mode** → paste URL in **Production URL**
6. Under recommended events for **Checkout Pro** integrations, select **Payments**
7. Under **Other events**, select **Plans and subscriptions** (for recurring offers)
8. **Save** configuration

Important: Without this URL and events, systeme.io cannot process payment events—buyers may pay in Mercado Pago while **Sales** → **Transactions** stays empty (same class of issue as missing [PayPal IPN](#)).

Step 4: Enable Mercado Pago on the Funnel

1. **Sites** → **Sales funnels** → your funnel
2. **Funnel settings**
3. Enable **Mercado Pago**
4. **Save**

Pair with [order form](#), [offer](#), and optional [order summary on thank you page](#).

Test and Go Live

- Use Mercado Pago **test credentials** only on test funnels; switch popup + webhook to **production** for real sales
- Run a small live payment; confirm transaction, contact, and access
- For subscriptions, confirm rebill behavior ([failed subscription payments](#))

Troubleshooting

Wrong country selected

Checkout or webhook fails—country in systeme.io must match Mercado Pago account region.

Test keys on live funnel

Payments never reconcile—use production Public Key and Access Token.

Webhook simulation errors in MP

Mercado Pago's test tool may show warnings; verify with a real small payment and [systeme.io Transactions](#).

Only one-time sales, subscriptions broken

Enable **Plans and subscriptions** on the webhook.

[Contact \[systeme.io support\]\(#\)](#) with Mercado Pago payment ID, buyer email, and webhook URL (redact secret segments if sharing publicly).

Frequently Asked Questions

Mercado Pago vs PayPal on the same funnel?

You can enable multiple gateways in funnel settings; buyers choose at checkout ([activate Stripe or PayPal](#)).

Do I need Zapier?

No for standard funnel checkout—native integration + webhooks is the intended setup.

External payment link only?

Some sellers use a Mercado Pago payment link on a button—that bypasses native sync; this article covers **integrated** checkout.
